

Slide Gate

Name _____ Order Number _____

QTY (_____) 3x3 4x4 Color _____ Height _____

Instructions on how to measure and build slide gate post

When Welding trolley supports to the post all measurements will be from the top of the post to the top of the trolley supports. Completely weld outsides and top of the support. Post that are not going to be powder coated need to have the welds sprayed with cold galvanized spray.

When measuring the gate for fit measure both ends and the center to insure a consistent spacing that varies no more than $\frac{1}{4}$ inch. Gates that vary more that $\frac{1}{4}$ inch should be reworked to insure proper operation.
